SATISH KUMAR P

Senior Java Full Stack Developer

+1 (470) 866-1440 • satishs.job@gmail.com • https://linkedin.com/in/satishpin

PROFESSIONAL SUMMARY

- **9+ years** of experience as a **Senior Java Full Stack Developer** delivering cloud-native, high-performance enterprise applications across **financial services, healthcare benefits, and auto insurance** industries; adept in end-to-end software development using **Java/J2EE technologies**, **microservices**, **RESTful APIs**, **Spring Boot**, and front-end frameworks like **Angular** and **React**.
- Deep expertise in **Java 8/11/17, Spring Boot, Spring MVC, Spring Security**, and distributed microservices architecture; skilled in building high-throughput **RESTful APIs**, securing APIs using **OAuth2** and **JWT**, and designing scalable systems following **AWS** Well-Architected principles.
- Hands-on experience in **DevOps and CI/CD,** including **Jenkins**, **GitLab CI**, and **Maven**; expertise in containerization using **Docker and Kubernetes**; built and optimized deployment pipelines using **Terraform and AWS CloudFormation** for infrastructure as code, achieving zero-downtime deployments across all environments.
- Expert in **AWS cloud-native architecture** (EC2, S3, Lambda, RDS, VPC, API Gateway, IAM, CloudWatch, SQS, SNS, EMR, EKS) and event-driven distributed systems using **Apache Kafka and Kafka Streams** for real-time payment fraud detection, transaction data processing, and network telemetry pipelines across financial services platforms.
- Experienced full-stack engineer with **Angular (v10-17) and React.js**, delivering responsive, high-performance UIs using TypeScript, Redux, HTML5, and CSS3 with lazy loading, reusable component libraries, and cross-browser accessibility standards.
- Trusted **technical leader** with full development ownership at **Morgan Stanley** and **BNY Mellon**; drove cross-team engineering standards, mentored junior developers, and delivered measurable business outcomes at enterprise scale.
- Hands-on with **Python scripting** and ETL pipeline development using Apache Spark and AWS EMR; experienced in real-time data processing, healthcare claims data integration, and insurance claims data aggregation, achieving a **37% improvement** in batch processing throughput.
- Consistently achieved high test quality using **JUnit and Mockito**; monitored production systems with **ELK Stack, Splunk, Prometheus, and AWS CloudWatch** with SLA alerting, reducing production incidents by 38% and improving mean time to resolution (MTTR) by 33%.
- Experienced in **Open Banking and fintech API development,** built RESTful APIs and platform integration services at Morgan Stanley for the Wealth Management digital platform (E*TRADE and Shareworks unification), enabling secure data sharing between Morgan Stanley's advisor portal and third-party fintech partners; engineered real-time Kafka Streams pipelines for transaction monitoring, reducing risk exposure across Morgan Stanley's wealth management ecosystem.
- Certified **Guidewire ClaimCenter Associate** with hands-on Guidewire PolicyCenter and ClaimCenter experience from GEICO engagement configuring claims processing rules, policy lifecycle workflows, and rating engine integrations using Gosu scripting; built SOX/FINRA-compliant microservices for BNY Mellon's Pershing NetX360+ platform processing financial transactions for thousands of institutional clients with full PII data access controls and RBAC; also holds **Google Cloud Professional Cloud Developer** certification.

TECHNICAL SKILLS

Languages	Java 8/11/17, J2EE, JavaScript (ES6+), TypeScript, Scala, SQL, PL/SQL, Python
Java / J2EE	Core Java, J2EE, JDBC, Spring IoC, Spring AOP, Spring Batch, JPA
Frameworks	Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Spring Cloud Gateway, Spring Batch, Hibernate ORM, GraalVM.
Frontend	Angular (v10-17), React.js, HTML5, CSS3, Bootstrap, TypeScript, Redux, NgRx, RxJS, jQuery, AJAX, JSON

Web Services	RESTful & SOAP APIs, Microservices Architecture, API Gateway, Swagger
AWS Services	EC2, S3, RDS, DynamoDB, Lambda, EKS, ECS, EMR, API Gateway, SQS, SNS, IAM, CloudFront, VPC, CloudWatch, CloudFormation, AWS CLI, CodePipeline, API Gateway,
Cloud Platforms	Amazon Web Services (AWS), Google Cloud Platform (GCP)
Databases (SQL)	Oracle (11g/12c/19c), MySQL, PostgreSQL
Databases (NoSQL)	MongoDB, Redis, DynamoDB
Insurance Platforms	Guidewire PolicyCenter, Guidewire ClaimCenter, Gosu Scripting, Guidewire Studio
Messaging	Apache Kafka, Kafka Streams
Containerization	Docker, Kubernetes, Helm, Terraform, AWS CloudFormation, Quarkus
CI / CD	Maven, Jenkins, GitLab CI/CD, Azure DevOps, SonarQube, Nexus
Testing	JUnit, Mockito, Selenium, Cypress, Jasmine, Karma
Monitoring	ELK Stack (Elasticsearch, Logstash, Kibana), Splunk, Prometheus, Grafana, Amazon CloudWatch
Security	Spring Security, OAuth 2.0, JWT, OIDC, LDAP, IAM RBAC, SAML, Ping Identity
App Servers	JBoss
Version Control	Git, GitLab, Bitbucket
Methodologies	Agile/Scrum, Waterfall, TDD, Design Patterns (MVC, Factory, Singleton, Builder, DAO, Proxy, Decorator, Strategy)

PROFESSIONAL EXPERIENCE

Senior Java Full Stack Developer

Morgan Stanley | Farmington Hills, MI **Jun 2024 – Present**

*Worked across two of Morgan Stanley's most active 2024 technology initiatives: the Wealth Management digital platform modernization (integrating E*TRADE and Shareworks onto unified infrastructure, enabling seamless data sharing across advisor, self-directed, and workplace channels) and the Morgan Stanley at Work equity compensation platform, which serves corporate clients with equity, retirement, and financial wellness solutions.*

Responsibilities:

- Developed **Spring Boot**/**Spring MVC**/**Spring Security microservices** for the Wealth Management platform and Morgan Stanley at Work, routing API traffic via **Spring Cloud Gateway** and connecting the E*TRADE platform to Morgan Stanley's advisor portal via **REST**; handled **OAuth 2.0**, AP/AR sync, **ACH** payment routing, and **REST**-based investment data APIs.
- Built **Kafka** pipelines for Morgan Stanley transaction monitoring and wealth management event processing, streaming portfolio risk signals and **ACH** status updates across 15+ **microservices**; tuned topic partitioning to sustain sub-100 ms event delivery during peak volumes.
- Applied **JWT** and **OAuth 2.0** across Wealth Management platform and Morgan Stanley at Work endpoints; implemented **Ping Identity** SSO (**SAML**, **OIDC**) to replace per-portal authentication across wealth management, E*TRADE, and Morgan Stanley at Work with a unified identity layer.
- Designed and maintained **SQL**/**PL/SQL** stored procedures in **Oracle** and **PostgreSQL** for Morgan Stanley's portfolio analytics and investment account APIs; refactored query execution plans for wealth management data endpoints, cutting average query time by 28%.
- Administered **AWS** infrastructure (**EC2**, **S3**, **RDS**, **IAM**, **SQS**, **SNS**, **Lambda**, **API Gateway**, **EKS**) for the Wealth Management platform and Morgan Stanley at Work; managed messaging middleware ensuring reliable event processing across advisor and workplace benefit systems.
- Built **Terraform** and **AWS CloudFormation** templates for IaC standardization across all environments; established **Jenkins** and **GitLab CI** pipelines enabling automated build, test, and zero-downtime deployment across dev, staging, and production.

- Monitored system performance with **Splunk**, **ELK Stack**, and **Prometheus** with SLA alerting; deployed **Redis** caching for wealth management balance lookups and improved async throughput via **Java 17** features and **Spring WebFlux** under peak transaction load; persisted session and NoSQL data in **MongoDB**; containerized all services with **Docker** and orchestrated via **Kubernetes (EKS)**; managed source control and sprint tracking via **Git** and **JIRA** in Agile/Scrum delivery cycles.
- Built **ETL** pipelines with **Scala** and **Spark** on **AWS EMR** to consolidate investment data into a unified analytics layer, cutting overnight batch processing time by 37%; leveraged **Kafka Streams** to feed risk signals into Morgan Stanley wealth management dashboards.
- Designed **Angular 17** front-end applications using **HTML5**, **CSS3**, **Bootstrap**, **TypeScript**, and **RxJS** for responsive UI behavior, meeting web accessibility and cross-browser standards while sustaining 85%+ test coverage via **JUnit**/**Mockito** and **Jasmine**/**Karma**.
- Published **REST**-based API specs on **Morgan Stanley's** developer portal and **Swagger** UI on Morgan Stanley's developer portal, enabling advisor technology partners to self-serve and integrate with Morgan Stanley's wealth management APIs without requiring direct engineering support.
- Led end-to-end delivery of 6+ **Java microservices** across the Wealth Management platform and Morgan Stanley at Work; automated **CI/CD** workflows via **Azure DevOps** and **Jenkins** with **SonarQube**/**Nexus** integration, cutting manual release effort and improving team deployment consistency.

Environment: *Java 17, Spring Boot, Spring MVC, Spring Security, Spring Cloud Gateway, WebFlux, Angular 17, TypeScript, OAuth 2.0, JWT, Ping Identity (SAML, OIDC), Oracle, PostgreSQL, MongoDB, Redis, Kafka, Kafka Streams, Apache Spark, Scala, Docker, Kubernetes (EKS), Terraform, Jenkins, GitLab CI, Azure DevOps, AWS (EC2, S3, Lambda, API Gateway, RDS, SQS, SNS, EMR, IAM, CloudWatch, CloudFormation), JUnit, Mockito, Jasmine, Karma, Splunk, ELK Stack, Prometheus, Git, JIRA, and Agile/Scrum.*

Senior Java Full Stack Developer

BNY Mellon | Pittsburgh, PA **Jan 2022 – May 2024**

Worked on BNY Mellon's Pershing NetX360+ platform, BNY Mellon's industry-leading clearing and custody portal serving thousands of institutional clients representing millions of investor accounts, building backend microservices for trade settlement, account management, portfolio reporting, and clearing services while supporting the firm's broader shift from legacy systems to a distributed, cloud-native architecture.

Responsibilities:

- Engineered a **RESTful API** platform for BNY Mellon Pershing's trade settlement, account management, and clearing services using **Java 11**, **Spring Boot**/**Spring MVC**/**Spring Data JPA** and **Spring Cloud Gateway**; enforced rate limiting and **Resilience4j** circuit-breaking to sustain 99.9% uptime for millions of daily member inquiries.
- Reduced API response times by 38% and database load by 32% by architecting a **Redis** distributed caching layer on top of **Oracle**/**PostgreSQL** relational stores and **MongoDB** NoSQL, eliminating redundant query execution across high-traffic insurance claims endpoints.
- Deployed **Kafka** pipelines for real-time **FIX Protocol** financial transaction intake, settlement updates, and client notifications across 20+ **microservices**; decoupled transaction routing from settlement services to enable independent deployability across the platform.
- Architected **Kafka**-based Saga choreography to coordinate transaction workflows across 12+ **microservices**, covering trade intake validation, account eligibility, and clearing determination; used **Spring Batch** for high-volume **SOX/FINRA**-compliant financial transaction processing.
- Administered full **AWS** infrastructure (**EC2**, **S3**, **RDS**, **DynamoDB**, **EKS**, **ECS Fargate**, **Lambda**, **API Gateway**, **SQS**, **SNS**, **IAM, and EMR**) with auto-scaling and least-privilege **IAM** policies; leveraged **Redshift** and **S3** data lake for large-scale financial transaction analytics.
- Enforced **SOX/FINRA** compliance across all BNY Mellon Pershing platform services; implemented **PII** and sensitive financial data access controls via **Spring Security** with **OAuth 2.0**, **JWT**, and **LDAP**; configured **RBAC** for trade operations specialists, compliance officers, and client service representatives.
- Delivered responsive **Angular** and **React.js** UIs built with **TypeScript**, **OAuth 2.0**, lazy loading, and **Redux**/**NgRx** state management; authored reusable component libraries reducing front-end code duplication by 22% across financial dashboards and advisor/client portals.

- Maintained 90%+ test coverage across BNY Mellon Pershing platform modules using **JUnit**, **Mockito**, **Selenium**, **Cypress**, **Jasmine**, and **Karma**; monitored production health via **Prometheus**, **Grafana**, and **CloudWatch** with SLA alerting, reducing incidents by 38% and improving MTTR by 33%; containerized services using **Docker** and orchestrated on **Kubernetes (EKS)** with **Helm**; drove build automation via **Jenkins** and **Maven** with **SonarQube** quality gates; managed version control and sprint delivery in **Git** and **JIRA** following Agile/Scrum practices.

Environment: *Java 11, Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Spring Cloud Gateway, Resilience4j, Spring Batch, Angular (v12-15), React.js, TypeScript, OAuth 2.0, JWT, LDAP, Oracle, PostgreSQL, MongoDB, Redis, Kafka, Spark, Docker, Kubernetes (EKS), Helm, Jenkins, Maven, SonarQube, AWS (EC2, S3, Lambda, API Gateway, DynamoDB, RDS, ECS Fargate, SQS, SNS, EMR, IAM, CloudFront, VPC, CloudWatch, CloudFormation, and Redshift), JUnit, Mockito, Selenium, Cypress, Jasmine, Karma, Prometheus, Grafana, Git, JIRA, and Agile/Scrum.*

Java Full Stack Developer

Delta Dental | Farmington Hills, MI **Jan 2020 – Dec 2021**

Joined Delta Dental as a full-time Java Full Stack Developer upon graduating in December 2019; contributed to the modernization of Delta Dental's healthcare benefits platform, developing backend microservices for healthcare claims processing, member and provider portal services, and benefits administration supporting millions of healthcare plan members and dental providers across the United States.

Responsibilities:

- Developed and maintained **RESTful APIs** using **Java 8** and **Spring Boot** for Delta Dental's healthcare benefits platform, including real-time electronic healthcare claims submission, member eligibility and benefits verification, and account management for millions of healthcare plan members and tens of thousands of dental providers nationwide.
- Integrated third-party healthcare clearinghouse and HIPAA EDI APIs connecting Delta Dental's healthcare claims adjudication, eligibility, and remittance platforms; implemented data transformation adapters to normalize X12 EDI transactions across heterogeneous payer systems, reducing downstream integration errors by 27%.
- Designed and optimized **SQL** schemas in **PostgreSQL** and **MongoDB** for member eligibility, healthcare claims history, and benefits data, reducing average query time by 22% through targeted index design and stored procedure optimization.
- Built **REST** and **Kafka**-based communication for Delta Dental's healthcare claims adjudication and benefits administration **microservices**; used **REST** for plan activation and **Kafka** for async claims status events, enabling independent deployment of services handling high-volume electronic claims processing spikes.
- Supported **AWS** cloud deployments across **EC2**, **S3**, **RDS**, **Lambda**, and **API Gateway**; containerized services using **Docker** and **Kubernetes** and built **CI/CD** pipelines using **Jenkins** and **Maven**, enforcing **SonarQube** quality thresholds across all modules.
- Developed responsive **Angular** and **React.js** UIs using **HTML5**, **CSS3**, **TypeScript**, and **Bootstrap** for member and provider-facing healthcare portals, employer group benefits administration dashboards, and internal operations tools; implemented **OAuth 2.0** and **JWT**-based authentication for secure access management.
- Supported integration of **Python**-based data validation and ETL pipelines for Delta Dental's healthcare claims analytics platform; automated data parsing and quality checks for HIPAA-compliant healthcare claims data, improving **Python** to improve data reliability upstream of downstream analytics models.
- Maintained 80%+ code coverage using **JUnit** and **Mockito**; participated in **Agile/Scrum** sprint planning using **JIRA**, collaborating with claims operations, dental provider relations, and compliance teams.

Environment: *Java 8, Spring Boot, Spring MVC, Spring Security, Hibernate ORM, REST APIs, microservices, Angular, React.js, TypeScript, HTML5, CSS3, Bootstrap, OAuth 2.0, JWT, PostgreSQL, MongoDB, Kafka, Python, Docker, Kubernetes, Jenkins, Maven, SonarQube, AWS (EC2, S3, RDS, Lambda, API Gateway), JUnit, Mockito, Git, JIRA, and Agile/Scrum.*

Software Engineer Intern

Delta Dental | Farmington Hills, MI **May 2019 – Dec 2019**

Part-time internship concurrent with Master's studies at Lawrence Technological University; contributed to backend Java development and RESTful API integration on Delta Dental's healthcare claims processing and provider portal platform under senior developer guidance.

Responsibilities:

- Developed **RESTful API** endpoints using **Java 8** and **Spring Boot** for healthcare claims submission, member eligibility verification, and provider notification features; wrote unit tests using **JUnit** and **Mockito** to validate business logic.

- Assisted in front-end UI development using **Angular**, **HTML5**, **CSS3**, and **TypeScript**; implemented form validations and integrated API responses into member and provider-facing portal screens.
- Collaborated with senior engineers on database schema design in **PostgreSQL** and participated in **Agile** sprint ceremonies, including daily stand-ups, sprint reviews, and retrospectives using **JIRA**.

Environment: *Java 8, Spring Boot, REST APIs, Angular, HTML5, CSS3, TypeScript, PostgreSQL, JUnit, Mockito, Git, JIRA, and Agile/Scrum.*

Junior Java Developer
Value Momentum | Hyderabad, India **Jul 2016 – Jul 2018**
Client: GEICO (Auto Insurance)
Built and enhanced enterprise insurance web applications for GEICO, a leading US auto insurer, using Guidewire PolicyCenter and ClaimCenter; delivered full-stack Java solutions with microservices architecture, RESTful APIs, and scalable data layers supporting millions of policyholders.

Responsibilities:

- Designed and implemented backend **microservices** using **Spring MVC**, **Spring Boot**, **Spring Cloud**, and **JPA**; developed **REST**ful and **SOAP-based** web services supporting policy quoting, rating engine integration, and claims intake workflows at GEICO.
- Worked extensively with **Guidewire PolicyCenter** and **ClaimCenter** to configure and customize insurance policy lifecycle workflows, claims processing rules, and integration touchpoints using **Gosu** scripting and **Guidewire Studio**.
- Integrated rating engine and billing vendor APIs via **SOAP** and **REST**, automating premium calculation and payment workflows; managed relational data via **JDBC**/**SQL** on **Oracle** and **MySQL**, and maintained **MongoDB** replica sets on **AWS EC2** for NoSQL data persistence.
- Built **AngularJS** directives, services, and reusable components; developed UI pages using **HTML5**, **CSS3**, **JavaScript**, **jQuery**, and **AJAX** with servlet-based PDF report generation; implemented client-side form validations and ensured cross-browser compatibility across insurance portal screens.
- Developed backend logic using **Servlets**, **EJB**, and **Hibernate**; deployed **Java EE** applications on **JBoss**; enabled application-level logging with **Log4j**; maintained source control in **Bitbucket**; and participated in design and code reviews in **Agile/Scrum** and **Waterfall** delivery cycles using **JIRA**.

Environment: *Java 8, J2EE, Spring Boot, Spring MVC, Spring Cloud, Spring AOP, Hibernate ORM, REST APIs, SOAP, Guidewire PolicyCenter, Guidewire ClaimCenter, Gosu, AngularJS, HTML5, CSS3, JavaScript, jQuery, AJAX, Oracle, MySQL, MongoDB, AWS EC2, Log4j, JUnit, Mockito, Bitbucket, Struts, EJB, JBoss, JIRA, Agile/Scrum, Waterfall*

EDUCATION

Master of Science in Computer Science | Dec 2019
Lawrence Technological University | Southfield, MI | Aug 2018 – Dec 2019
